SKILLS

JavaScript
React
HTML
CSS
Git

LANGUAGES

Finnish
English

COURSES

FRONTEND DEVELOPMENT

Strive School   June 2021 - October 2021

An intensive full-time frontend development course with over 300 hours of coding.

PROJECTS

Spotify Stats App

Built as a capstone project for the Strive School frontend bootcamp, this app allows its users to see their most listened to artists and tracks, recently played tracks and recommended tracks by logging into their account using the Spotify API. The app was independently designed and developed on my own using React, Bootstrap, and CSS.

Weather App

A weather app built using React. This solo project can show weather reports including hourly temperature, humidity and wind speed using the OpenWeather API. As of now can be used only for certain locations, but is planned to be expanded for use for any location.

LinkedIn Clone

A collaborative effort between team members from a bootcamp course, this app is designed to be a clone of LinkedIn that replicates much of the design and functionality of popular Linkedin services. I contributed to a large portion of the design and project management aspects, and contributed to functional parts as well, such as API fetching within React components.
